Using the code One of the best things about a good application architecture is the Separation of Concerns (SoC). One of the evident features of an ASP.NET MVC application is the ability to provide this separation of concerns out of the box. The Model will represent the business objects needed to implement the solution.

## Aspnet Mvc Application Architecture Guidelines

Let's understand the MVC architecture supported in ASP.NET. MVC stands for Model, View, and Controller. MVC separates an application into three components - Model, View, and Controller. Model: Model represents the shape of the data. A class in C# is used to describe a model. Model objects store data retrieved from the database. Model represents the data. View: View in MVC is a user interface. View display model data to the user and also enables them to modify them.
