Music at the Limits brings together three decades of Edward W. Said's essays on music. Addressing the work of a wide variety of composers and performers, Said analyses music's social and political contexts, and provides rich and often surprising assessments. He reflects on the censorship of Wagner in Israel; the relationship between music and feminism; and the works of Beethoven, Bruckner, Rossini, Schumann, Stravinsky and others. Always eloquent and often surprising, Music at the Limits reinforces Said's reputation as one of the most influential writers of the twentieth century.

Globalization has created an interconnected world, but has not diminished violence and militarism. The Economics of Killing describes how the power of global elites, entrenched under globalization, has created a deadly cycle of violence. In this groundbreaking work, Vijay Mehta shows how attempts at peaceful national development are routinely blocked by Western powers. He centers the 2008 financial crisis in US attempts to block China's model of development. He shows how Europe and the US conspire with regional dictators to prevent countries from developing advanced industries, and how this system has fed terrorism. Mehata argues that a different world is possible, based on policies of disarmament, demilitarization, and sustainable development. This original and thought-provoking book will be of great interest to anyone concerned about the consequences of endless war fueled by the West.

"This is a book about what the science of perception can tell us about visualization. There is a gold mine of information about how we see to be found in more than a century of work by vision researchers. The purpose of this book is to extract from that large body of research literature those design principles that apply to displaying information effectively"--
