The prenatal period is of interest to developmental psychologists who seek to understand how the earliest influences on development can impact later growth during childhood. Psychologists may look at how primary reflexes emerge before birth, how fetuses respond to stimuli in the womb, and the sensations and perceptions that fetuses are capable of detecting prior to birth.

Child and adolescent psychology programs prepare graduates for many different roles and responsibilities. For example, school psychologists develop education performance plans for students with special needs. Mental health counselors focus on helping young people cope with trauma, low self-esteem, and suicidal impulses.
