Logic programming has developed as a rich field, built over a logical substratum whose main constituent is a nonclassical form of negation, sometimes coexisting with classical negation. The field has seen the advent of a number of alternative semantics, with Kripke – Kleene semantics, the well-founded semantics, the stable model semantics, and the answer-set semantics standing out as the most successful.

Logic programming is a programming paradigm which is largely based on formal logic. Any program written in a logic programming language is a set of sentences in logical form, expressing facts and rules about some problem domain. Major logic programming language families include Prolog, answer set programming (ASP) and Datalog.

The Association for Logic Programming (ALP) was founded in 1986. Its mission is "to contribute to the development of Logic Programming, relate it to other formal and also to humanistic sciences, and to promote its uses in academia and industry all over the world". It manages the International Conference on Logic Programming, oversees the Theory and Practice of Logic Programming (TPLP) journal published by Cambridge University Press, and

publishes an electronic newsletter.

A program theory is similar in concept to logic models, which have become increasingly popular in human services programs over the past several years. In simple terms, a logic model is a picture of your theory – a drawing that shows how one thing leads to the next, like a flow chart.

~~Program theory and logic models - EvaluATOD~~

A program logic model sets out the resources and activities that comprise the program, and the changes that are expected to result from them. It visually represents the relationships between the program inputs, goals and activities, its operational and organisational resources, the techniques and practices, and the expected outputs and effects. Other terms that are commonly used for models that depict a similar causal pathway for programs are theory of change, program theory and logic models ...

A logic model presents a picture of how your effort or initiative is supposed to work. It explains why your strategy is a good solution to the problem at hand. Effective logic models make an explicit, often visual, statement of the activities that will bring about change and the results you expect to see for the community and its people.
