Little evidence supports the routine use of activity restriction for preterm birth and other obstetric conditions, and some data indicate adverse impact on obstetric outcomes. Since the 1900s, based on the belief that activity restriction results in uterine quiescence and increased blood flow to the uterus, obstetrical care providers have recommended activity restriction to prevent preterm birth (PTB), and it remains a common intervention for PTB prevention in multiple clinical settings ...

DESCRIPTION. This new edition of an acclaimed text reviews the evidence for best practice in maternal-fetal medicine, to present the reader with the right information, with appropriate use of proven interventions and avoidance of ineffectual or harmful ones, and by rating the evidence of the key references. The information is presented in the right format by summarizing evidence succinctly and clearly in tables and algorithms.
