Analysis Snijders  
Snijders (2001)

describes a method  
for non-parametric  
scale analysis of  
two-level data. The  
nesting structure is  
defined by

"subjects" (level-

# Read Online

## Multilevel

Analysis  
Snijders  
one units) being nested in "objects" (level-two units).

Each subject provides responses on a set of  $m$  dichotomous items with regard to the object in which this subject is nested.

### Statistics

'Overall, Snijders and Bosker provide an accessible and readable text on the subject of multilevel analysis. It is as much tailored to the needs of advanced quantitative researchers, as to relative beginners in the field.
