SCI COMMUN### Infectious diseases
The 11th Ebola outbreak in the Democratic Republic of the Congo (DRC) is officially over, giving the country respite from the disease for the first time in more than 2 years. On 18 November, the World Health Organization (WHO) announced that no new cases had been identified for 42 days, twice the incubation period for the deadly virus.

Offers an easy-to-understand baseline pathology reference that presents all information needed in North American slaughterhouses and poultry production operations to identify and diagnose pathological problems and evaluate the suitability of poultry carcasses (chicken, turkeys, ducks, and geese). Included are 405 full colour photographs of lesions, supported by descriptive findings, 31 additional illustrations, and additional data.

"The sections in the book are organized by diseases, which are grouped by etiology. Each section consists of text and pictures of gross lesions. The majority of pictures were taken in situ to show how the lesions appear at necropsy. Although gross

lesions are emphasized, etiology, clinical signs and, if applicable, pathogenesis of the disease process and transmission of infectious agent are included. More than 1,200 high-quality figures show the gross pathology of over 120 avian diseases. The overwhelming majority of pictures come from diagnostic cases that the authors have seen during their careers as avian pathologists. Several figures are included for some diseases to show gross lesions in organs and tissues that vary in distribution, extent and severity"--Publisher's description.
