6.7 The total mass of the solution is obtained by adding the volumes together and by using the density of water (1,000 g/mL). This gives 33 + 42 = 75 mL, or 75 g. The heat absorbed by the solution is  $q = s \times m \times t = 4.184 \text{ J/(g } ^\circ\text{C)} \times 75 \text{ g} \times (31.8 ^\circ\text{C} - 25.0 ^\circ\text{C)} = 2133.8 \text{ J}$  The heat released by the reaction,  $q_{\text{rxn}}$

Solutions To Exercises

Exercise Problems 1. In this page we will practise some of the things we have learned before. You should try to solve each problem on your own before looking at the solutions. Problem 1. Some years ago an insurance company did a study of their policies and found that 30% of them where for cars. They randomly select 532 of their current policies ...
