The Feedback Loop Books 1

The Feedback Loop is a type of Groundhog Day, set in cyberspace. Quantum ("Call me Quantum") Hughes is stuck

in a loop, the only real player in a Proxima Galaxy game, his logout having stopped working some 540+ 'days' before.- he knows that because he added a new item to his inventory after each awakening.

Unlike any gamelit/LitRPG book you've read, The Feedback Loop box set is a genre-defying series that spans multiple online worlds. The intrigue increases as the pages turn.

The Feedback Loop Box Set (2 Book Series)

This collection includes the first three books of an awesome, action packed LitRPG series. The story is wild and complex and a total blast. Quantum Hughes, the main character of the series, is a wisecracking badass. The first book takes place in dark noir VR murder world, think the Matrix on steroids.

Offering a fresh understanding of the learning potential of youth videogaming in public libraries, and delving into research-based accounts which showcase feedback mechanisms that nurture meaningful learning, Abrams and Gerber equip readers to re-envision library programming that specifically features youth videogame play.

In the years following her role as the lead author of the international bestseller, Limits to Growth—the first book to show the consequences of unchecked growth on a finite planet— Donella Meadows remained a pioneer of environmental and social analysis until her untimely death

Page 12/25

in 2001. Thinking in Systems, is a concise and crucial book offering insight for problem solving on scales ranging from the personal to the global. Edited by the Sustainability Institute's Diana Wright, this essential primer brings systems thinking out of the realm of computers and equations and into the tangible world, showing readers how to develop the systems-thinking skills that thought leaders across the globe consider critical for 21st-century life. Some of the biggest problems facing the world—war, hunger, poverty, and environmental degradation—are essentially system failures. They cannot be solved by fixing one piece in isolation from the others, because even seemingly minor details have enormous power to undermine the best efforts of too-narrow thinking. While readers will learn the

conceptual tools and methods of systems thinking, the heart of the book is grander than methodology. Donella Meadows was known as much for nurturing positive outcomes as she was for delving into the science behind global dilemmas. She reminds readers to pay attention to what is important, not just what is quantifiable, to stay humble, and to stay a learner. In a world growing ever more complicated, crowded, and interdependent, Thinking in Systems helps readers avoid confusion and helplessness, the first step toward finding proactive and effective solutions.

Young adults (and plenty of not-so-young adults) are addicted to the Internet. No surprise there. It's easy for parents and teachers, politicians and pundits to brush off

Internet addiction as a harmless, inevitable consequence of the digital age, a small price to pay for carrying the information super-highway around in our pockets. But what if I told you that young adults (and plenty of not-so-young adults) are stuck in a feedback loop of digital sexual stimulation, addicted not just to the Internet but to pornography and social media? And what if I told you that the consequences of these addictions may be quite dire--ranging from depression, anxiety and ADHD to sexual dysfunction and violence? And what if I told you that, as far as social media companies and pornography producers and anyone who advertises on the Internet is concerned, the feedback loop is exactly where we belong? This book pulls readers out of the matrix. Part manifesto, part

autobiography, part self-help roadmap, Breaking the Feedback Loop is a concise, essential guide to porn and social media addiction written for young adults and anyone else suffering at the hands of the Internet.

Online markets such as Amazon have completely changed retailing, and even small companies can use these e-commerce platforms to compete with the biggest and best in the world. But success requires new ways of thinking, outstanding customer service, and unprecedented speed. Bernie Thompson's small electronics company became one of the first private-label brands to successfully capitalize on Amazon fulfillment, and even Amazon has touted him as a success. Now he shares how you can find similar success.

Going well beyond the basics, which are widely available elsewhere, this book is for more sophisticated private-label sellers and manufacturers who recognize that there are no tricks or schemes, only winning strategies, best practices, and tools for overcoming the inertia of discoverability to get the sales flywheel moving. Specific tips and advice include where to focus your energy, how to make data actionable, and how to close the feedback loops that drive successful e-commerce.

Sterling Monedero is not your typical necromancer. Even with the game system and mancer class forced onto him by the alien monoliths known as Godwalkers, Sterling just wants to farm his peppers in peace and live out the rest of

his troubled existence in quiet. He did that whole 'trying to get revenge on the Godwalkers' thing five years ago, and failed miserably. But when the Godwalkers show back up for their own bit of revenge - and Killbilly bandits appear trying to impose a pepper tax - the tough-as-bones loner decides enough is enough. It's time to reassemble the team, kick some much needed ass, and put an end to the alien threat once and for all. Or die trying. Set in a richly imagined post-apocalyptic New Mexico, this gritty LitRPG western features superpowered mancers, terrifying animal-skeletal hybrids, an intricate game system, and a big dose of Southwestern mysticism. Inspired by The Dark Tower, Old Man Logan, and Red Dead Redemption, best-selling author Harmon Cooper takes you on a high-octane thrill ride through desolate

landscapes and dystopian urban decay, on an adventure that doesn't know how to back down from a challenge.

Quantum Hughes is finding out adjusting the real world isn't exactly easy. When he takes a new assignment, he finds out he has two options return to the LOOP, or try to hold his own.

This book is a collection of articles, written by both academics and practitioners as an evidence base for citizen engagement through information and communication technologies (ICTs). In it, the authors ask: how do ICTs empower through participation, transparency and accountability? Specifically, the authors examine two

principal questions: Are technologies an accelerator to closing the "accountability gap" – the space between the supply (governments, service providers) and demand (citizens, communities, civil society organizations or CSOs) that requires bridging for open and collaborative governance? And under what conditions does this occur? The introductory chapters lay the theoretical groundwork for understanding the potential of technologies to achieving intended goals. Chapter 1 takes us through the theoretical linkages between empowerment, participation, transparency and accountability. In Chapter 2, the authors devise an informational capability framework, relating human abilities and well-being to the use of ICTs. The chapters to follow highlight practical examples that

operationalize ICT-led initiatives. Chapter 3 reviews a sample of projects targeting the goals of transparency and accountability in governance to make preliminary conclusions around what evidence exists to date, and where to go from here. In chapter 4, the author reviews the process of interactive community mapping (ICM) with examples that support general local development and others that mitigate natural disasters. Chapter 5 examines crowdsourcing in fragile states to track aid flows, report on incitement or organize grassroots movements. In chapter 6, the author reviews Check My School (CMS), a community monitoring project in the Philippines designed to track the provision of services in public schools. Chapter 7 introduces four key ICT-led, citizen-governance initiatives in primary health care in

Karnataka, India. Chapter 8 analyzes the World Bank Institute's use of ICTs in expanding citizen project input to understand the extent to which technologies can either engender a new "feedback loop" or ameliorate a

"broken loop". The authors' analysis of the evidence signals ICTs as an accelerator to closing the "accountability gap". In Chapter 9, the authors conclude with the Loch Ness model to illustrate how technologies contribute to shrinking the gap, why the gap remains open in many cases, and what can be done to help close it. This collection is a critical addition to existing literature on ICTs and citizen engagement for two main reasons: first, it is expansive, covering initiatives that leverage a wide range of technology tools, from mobile phone reporting to

crowdsourcing to interactive mapping; second, it is the first of its kind to offer concrete recommendations on how to close feedback loops.

More than half of the analytics and machine learning (ML) models created by organizations today never make it into production. Some of the challenges and barriers to operationalization are technical, but others are organizational. Either way, the bottom line is that models not in production can't provide business impact. This book introduces the key concepts of MLOps to help data scientists and application engineers not only operationalize ML models to drive real business change but also maintain and improve those models over time. Through lessons based on

numerous MLOps applications around the world, nine experts in machine learning provide insights into the five steps of the model life cycle--Build, Preproduction, Deployment, Monitoring, and Governance--uncovering how robust MLOps processes can be infused throughout. This book helps you: Fulfill data science value by reducing friction throughout ML pipelines and workflows Refine ML models through retraining, periodic tuning, and complete remodeling to ensure long-term accuracy Design the MLOps life cycle to minimize organizational risks with models that are unbiased, fair, and explainable Operationalize ML models for pipeline deployment and for external business systems that are more complex and less standardized
